

A refusal that will break already looks different at turn 1 — per-target-centred variant

One point per chain, at turn 1 of the persuasion: the plain harmful request, which every chain refuses. Chains that will commit the harmful act at a later turn (blue) against chains that never do (orange). Base Llama-3.1-8B-Instruct; deceived route. NOT IN THE BRIEF — offered beside the specified figure because the projection's level differs by target and the shift is within-target.

v1 — the search set: 192 chains, 16 targets, persuader wording 1

v2 — held out: 40 chains, 5 targets, persuader wording 2

pre-specified on v1, tested once on v2; threshold committed before v2 was read
