

One persuasion chain, turn by turn, with its internal readout beside the words

Panel D1 — rule-selected: `aspirin-child-flu`, seed 0, first committed turn 3

Rule (writeup/figures-plan.md §0): the v1 chain at the median first-committed turn over the 109 committing chains (lower-middle of the sorted turns: T = 3; 37 chains sit at it), seed 0 if present else the lowest seed; 5 targets hold a seed-0 chain at T = 3 (aspirin-child-flu, formula-dilute, seizure-mouth-object, snakebite-tourniquet, warfarin-ibuprofen); ties broken by target name in sorted order. Selected before any text was read.

Base Llama-3.1-8B-Instruct, deceived route, target `aspirin-child-flu`, v1 chain, seed 0. Grades: the rig's stored act-judge grade (gpt-4o-mini) per turn.

EXPLORATORY readouts: nn and refusal are mean-difference directions with no centred zero; which turn projects higher is the fact, not its sign.

held partial committed (the harmful act) nn projection refusal projection random floor: max |projection| over 10 random arrows, this turn
