

S1g - one pre-specified out-of-sample test of the S1e trigger
the held-out v2 chains: 40 chains over 5 targets, second persuader wording, never used in the nine-axis search
axes, band, position, statistic, direction and label source all fixed before the data was read
count-weighted headline: nn 0.662 against a largest-seed floor of 0.585, REPLICATED | persona_meandiff 0.407 against 0.389, not replicated | EXPLORATORY
